Time-Bandwidth Products AG announces its participation in the European LIFT project, funded by the NMP Directorate in the 7th Framework Programme of the European Commission

LIFT – Leadership in Fibre Laser Technology

Time-Bandwidth will contribute to this project by the development of a sub-picosecond MOPA laser achieving several hundred Watts average output power.

The patented SESAM[®] technology, the core competence of Time-Bandwidth, will be used to generate the sub-picosecond laser pulses. Reliable, industrial proven oscillator and amplifier schemes will be combined for next generation industrial micro-machining workstations.
